

Emil Conradsson

Fullstack Engineer | React | TypeScript | Node.js | Next.js | AI Integration

Email: Emil.conradsson1@gmail.com

Phone: +46 765 541 507

Live project: chatos.chat

Location: Stockholm, Sweden

PROFESSIONAL SUMMARY

Fullstack engineer with a strong foundation in React, TypeScript, Next.js, and Node.js. I take end-to-end ownership of products, from architecture and database design through to frontend, payments, auth, and deployment. I have shipped a live SaaS product with active users entirely on my own, delivered two freelance client projects in parallel with full-time studies, and been recommended from one client to the next. I use AI-assisted development tools including Cursor and Claude Code daily as a core part of how I build, and have shipped real AI features including RAG pipelines, agentic workflows, and LLM integration in production.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Backend and Data: Node.js, Express, PostgreSQL (Supabase), MySQL, Prisma, Redis (Upstash), REST API design

Payments and Auth: Stripe (live production), Supabase Auth, Firebase Auth (prior projects)

Headless CMS: Sanity (schemas, GROQ queries, headless e-commerce architecture)

AI and Automation: LLM APIs (Claude, OpenAI), RAG pipelines, vector search and embeddings, agentic systems, tool use, layered memory architecture, n8n

Cloud and Tools: Vercel, AWS (project deployment), Firebase (prior projects), Git, Figma, Cursor, Claude Code

Languages: Swedish (Native), English (Fluent), Thai

PROJECTS

Personal SaaS Project | chatos.chat | Live with active users

2024 to Present

- Built and shipped a fullstack TypeScript application in React, Next.js, and Node.js with Supabase and Prisma, working on it almost every day for over a year with active users in production.
- Owned the full stack end-to-end: architecture, database schema, REST API, React frontend, modular component system, Stripe payments, Supabase Auth, and Vercel deployment.
- Built a workspace-scoped RAG pipeline with a retrieval planner, vector embeddings via pgvector, and a layered memory system using Redis for short-term state and structured Supabase rows for long-term context.
- Integrated Claude and OpenAI APIs as core product functionality, with agentic workflows and multi-step orchestration built into the product architecture.
- Designed the complete visual language and glassmorphism design system, with deliberate attention to user experience, interface clarity, and onboarding flow.

Modular AI Agent System | Personal Project

2025 to Present

- Designed a modular Node.js backend for composing AI agents with tool use, function calling, and multi-step orchestration, integrating Gmail, Google Calendar, and Telegram APIs for real workflow automation.
- Implemented short-term memory via Redis and long-term memory as structured Supabase rows, with n8n automation pipelines for social media and content workflows.

E-commerce Platform with Headless Architecture | Personal Project

2024 to 2025

- Built a fullstack e-commerce platform in Next.js and TypeScript with Sanity as headless CMS, MySQL and Supabase for data, Stripe for payments, SSR for performance and SEO, deployed on Vercel.

WORK EXPERIENCE

Freelance Consultant, AI Assistant and API Integrations | External Client (via referral) 2024 to 2025

- Referred by previous client Invest Viable AB. Built and delivered a client-facing AI assistant integrated with Gmail, Google Calendar, and Telegram, translating real business requirements into a working production system. Reference available.

UI/UX Designer (Freelance) | Invest Viable AB 2024 to 2025

- Freelance UI/UX design for a stock analysis and valuation platform in Figma, covering component structure, information hierarchy, and visual language. Reference available.

Both freelance engagements delivered in parallel with full-time studies at KYH.

EDUCATION

Front End Developer | KYH Yrkeshogskola 2023 to 2025

- Two-year vocational programme covering React, Next.js, TypeScript, HTML/CSS, and JavaScript with applied backend modules including authentication, REST API integration, and database fundamentals.

Commerce and Administration | Jensen South High School 2013 to 2016
